It's a Fact

Nicor Gas is committed to supporting the adoption of **clean technologies** that advance decarbonization of the gas system **affordably** and **reliably**, including a test pilot on residential gas heat pumps.

Our state-of-the-art infrastructure supports **affordable decarbonization** by helping enable the **growth** of cleaner fuels like renewable fuels and certified natural gas.

During extreme winter weather, **natural gas** delivered from Nicor Gas' storage fields accounted for approximately **50%** of the energy distributed.

Natural gas is a **critical** fuel that is used by **power generators** in Illinois to support local and regional electricity system reliability.*
